Land Northeast of M42 Junction 10
Note on AECOM TRANSYT Comments, March 2024

Client: Hodgetts Estates Limited Date: 8th March 2024

1 Introduction

1.1 Tetra Tech (TT) have been appointed by Hodgetts Estates to provide technical support for their outline planning application for a proposed development of up to 100,000sqm of employment uses and 150 space overnight lorry park (including an associated 400sqm amenity block) on land to the northeast of M42 Junction 10. The application is also supported by a Revised Transport Assessment (TA) prepared by TT, dated February 2023 and a TA Addendum (TAA), dated December 2023.

1.2 This Note seeks to address the comments made by AECOM, provided by email from Patrick Thomas on 29th February 2024 (attached in Appendix A) in relation to TT's M42 Jn10 TRANSYT model results provided in the supporting TAA, dated December 2023 and the v6 TRANSYT model files supplied on 29th January 2024.

1.3 Each comment raised has been addressed in turn below.

2 Demand Dependency Calculations at the A5 / Core 42 Junction

2.1 NH/ AECOM comment summary: *The models have been updated with the demand dependencies as requested.*

2.2 Validation models are now agreed.

2.3 NH/ AECOM comment summary: *The transyt model results in the TAA Appendix H appear to be from model version 5.1 and should be updated to model version 5.2.*

2.4 TRANSYT model version 5.0 was issued in the October 2023 in response to the Baseline Validation report (submitted August 2023). The model was further amended in November to version 5.1 in response to AECOM comments on the stage dependencies at the A5/ Core 42 junction. A version 5.2 model was issued at the end of January 2024 in response to comments from NH/ AECOM on 25th January updating the frequency of Stage 3 at the Meridian Drive junction in the PM peak period. Note that this model was based on the original validation of the A5/ Pennine Way north roundabout. These updated results were not included in the submission of the TAA in December 2023.

2.5 As part of the TAA submission in December 2023 the model was amended for the validation of the A5/ Pennine Way north roundabout and identified as version 6. This model included the correct stage dependencies and frequency of calls as included in the version 5.2 model.

2.6 Therefore in TAA Appendix H, Table 5.1a shows the amended validation results using Model 5.1 (version submitted to NH in November 2023). Table 5.1b shows the 2023 further validation (A5/ Pennine Way North roundabout) results from model version 6 so that the results of the validation adjustment could be compared. Thus Table 5.1a is from model version 5.1, and Table 5.1b is from model version 6.

2.7 As discussed at para 2.4 above, NH/ AECOM provided comments on the now superseded validated model version 5.1 and thus were corrected post submission of the TAA in model version 5.2. Following AECOMs comments at 2.1 above, the results in Table 5.1a have been checked against model version 5.2 (as at 29-1-24) and have been corrected. The results in Table 5.1b have been reviewed against the model version 6 (as at 29-1-24) and some minor inconsistencies have been found and corrected.

2.8 The updated Tables, Table 5.1a v2, and Table 5.1b v2 are attached respectively at Appendix B and Appendix C to this report.

3 Reporting of the TRANSYT Results in the Transport Assessment Addendum

3.1 NH/ AECOM comment summary: *The results in TAA Appendices H, J, K, M, and O should be updated to reflect the results from the supplied models.*

3.2 It was noted that the results presented at Appendices J, K, M and O were results from older models and the correct results were not appended, that said the differences in the modelled results were minor to negligible. The model summary text within the TAA was based on the correct modelling results.

3.3 However, as a result of the following 3 points raised by AECOM, a revised TRANSYT model version 7.0 has been produced and the results tables for Appendices J, K, M and O have been updated and are attached as set out in Section 7.

4 Give Way Parameters at the new A5 / Long Street / Gypsy Lane Junction

4.1 NH/ AECOM comment summary: *There is a difference between opposed maximum flow value and coefficient value used in the model and that suggested by JCT. The method of calculating the values should be provided.*

4.2 The opposed maximum flow value and coefficients used in the TRANSYT model were obtained by setting the junction up as a priority crossroads junction, using the junction parameters and then extracting the relevant intercept and co-efficient values and entering them into the signal-controlled junction arrangement as set out in the TRANSYT manual.

4.3 For simplicity and to agree a set of parameters, the JCT values of 1439 for the maximum flow when opposed and a coefficient of 1.09 have been used for each of the three turning streams. Refer to Section 7 for the references to the new junction model results.

5 U-turning flows at the A5 Dordon Roundabout

5.1 NH/ AECOM comment summary: *The existing A5 u-turning flows at Dordon roundabout cannot occur at the proposed signal junction. These flows have not been redistributed in the model. Should these vehicles (64pcu AM peak and 45pcu PM peak) be redistributed to New Street-Long Street?*

5.2 As the volume of u-turners (travelling eastbound and then u-turning to head westbound) is very low in comparison to the total junction flow (less than 2% in the AM and PM peaks), the u-turners had not been redistributed in the Local Plan TRANSYT model.

5.3 Upon review and as mentioned by AECOM, it is probable that the u-turn movements will turn left up New Street, turn right onto Browns Lane, right again onto Long Street and then finally turn right at the new signalised junction arrangement to head westbound on the A5. For the 2033 Local Plan models, the 64pcu undertaking this movement in the AM peak and 45pcu in the PM peak has been added onto the right turn movement from Long Street. Updated results tables are attached as set out in Section 7.

5.4 For the A5 westbound to A5 eastbound u-turn the respective AM and PM peak hour flows are 2pcu and 5pcu. The likely alternative route is via Long Street – Brown's Lane and New Street. Because the volume of traffic is so small these u-turning flows have not been redistributed.

6 Maximum Green Time Violation

6.1 NH/ AECOM comment summary: *The maximum green time of 6 seconds has been exceeded at Green Lane exit Toucan Crossing.*

6.2 In the PM peak, the green time for the pedestrian Phase B (at the Green Lane exit Toucan Crossing) had been incorrectly set to 33 seconds whilst the traffic approach, Phase A has been set to 14 seconds. The pedestrian phase B should be set at 6 seconds and the traffic Phase A set at 41 seconds. The v6 TRANSYT models are therefore pessimistic for vehicular traffic on this movement. The models have been corrected so that the pedestrian phase B only receives a green signal for 6 seconds. Updated results tables are attached as set out in Section 7.

7 TRANSYT Results Tables

7.1 The TRANSYT model has been updated where applicable to take on board the comments listed above at Sections 4 to 6 and is now model version 7.0.

<u>2026 Reference Case</u>

7.2 Appendix J of the TAA set out the results of the 2026 Reference Case TRANSYT Assessment for both the No Development and With Development traffic flows. A revised results table, Table 5.2a is attached at Appendix D to this note.

7.3 The No Development models have been provided electronically in the file "1.M42 Jn10 and A5 – Exist With Ref Case Pen Way & Dordon v7No Development.t16".

7.4 The With Development models have been provided electronically in the file "2. M42 Jn10 and A5 – Exist With Ref Case Pen Way & Dordon v7 Site Access & Mitig With Development.t16".

7.5 The results are very similar to those presented in Appendix J of the TAA, with a maximum change of queue of +/- 3pcu and no more than +/- 9 second difference. Approximately 95% of the results are either identical with only a +/- 1pcu and/ or +/- 4 second difference.

7.6 The impacts from the development, with mitigation in place are not considered severe with reference to NPPF para 111 and no additional mitigation to that identified for the M42 Junction 10 is required.

2033 Reference Case

7.7 Appendix K of the TAA set out the results of the 2033 Reference Case Transyt Assessment for both the No Development and With Development traffic flows. A revised results table, Table 5.3a is attached at Appendix E to this note. The With Development models are based on the No Development model but with the inclusion of the proposed site access arrangement (TT Drawing 784-B033920-TTE-00-ZZ-PL-H-0002-P02 in Appendix H) and the M42 Junction 10 improvement scheme (TT Drawing 784-B033920-TTE-00-ZZ-SK-H-0001-P04 also in Appendix H).

7.8 The No Development models have been provided electronically in the file "1.M42 Jn10 and A5 - Exist With Ref Case Pen Way & Dordon v7 No Development.t16".

7.9 The With Development models have been provided electronically in the file "2. M42 Jn10 and A5 - Exist With Ref Case Pen Way & Dordon v7 Site Access & Mitig With Development.t16".

7.10 The results are very similar to those presented in Appendix K of the TAA, with a maximum change of queue of +/- 2pcu and no more than +/- 13 second difference. Approximately 95% of the results are either identical with only a +/- 1pcu and/ or +/- 3 second difference.

7.11 The impacts from the development, with mitigation in place are not considered severe with reference to NPPF para 111 and no additional mitigation to that identified for the M42 Junction 10 is required.

2033 Local Plan

7.12 Appendix M of the TAA set out the results of the 2033 Local Plan TRANSYT Assessment for both the No Development and With Development traffic flows. A revised results table, Table 5.4a is attached at Appendix F to this note. The With Development models are based on the

No Development model, with the removal of the M42 southbound left turn slip to the A5 eastbound but with the inclusion of the site access and M42 Junction 10 upgrades as shown in Appendix H.

7.13 The No Development models have been provided electronically in the file "3. M42 Jn10 and A5 - Local Plan Model v7 No Development.t16".

7.14 The With Development models have been provided electronically in the file "4. M42 Jn10 and A5 - Local Plan Model v7 with Site Access & Mitigation With Development.t16".

7.15 The results are very similar to those presented in Appendix M of the TAA, with a maximum change of queue of +/- 3pcu and no more than +/- 42 second difference. Approximately 90% of the results are either identical with only a +/- 1pcu and/ or +/- 10 second difference. The impacts from the development, with mitigation in place are not considered severe with reference to NPPF para 111 and no additional mitigation to that identified for the M42 Junction 10 is required.

7.16 The proposed development does not result in a significant constraint to the delivery of Local Plan allocated sites and will deliver some of the highway improvements needed to accommodate the Local Plan allocations on the highway network.

2033 Local Plan & Additional Mitigation

7.17 Appendix O of the TAA set out the results of the 2033 Local Plan TRANSYT Assessment for both the No Development and With Development traffic flows, but including additional mitigation works. A revised results table, Table 5.5a is attached at Appendix G to this note.

7.18 The No Development models have been provided electronically in the file "3. M42 Jn10 and A5 - Local Plan Model v7 No Development.t16".

7.19 The With Development models have been provided electronically in the file "5. M42 Jn10 and A5 - Local Plan Model v7 with Site Access & Addl Mitigation With Development.t16".

7.20 The results are very similar to those presented in the TAA, with a maximum change of queue of +/- 3pcu and no more than +/- 42 second difference. Approximately 90% of the results are either identical with only a +/- 1pcu and/ or +/- 10 second difference.

7.21 With the additional mitigation the impact of the development is less, is not severe and does not significantly constrain the delivery of Local Plan allocations or highway improvement schemes. Under this scenario, the package of mitigation will again deliver some of the highway improvements needed to accommodate the Local Plan allocations on the highway network.

8 Summary and Conclusions

8.1 This Note seeks to address the comments raised by AECOM, summarised below.

- Demand dependency calculations at the A5/ Core 42 junction.
- Reporting of the TRANSYT results in the Transport Assessment Addendum.
- Give way parameters at the new A5/ Long Street/ Gypsy Lane junction in the Local Plan scenario.
- U-turning flows at the A5 Dordon Roundabout, in the Local Plan scenario.
- Maximum green time violation on the M42 Jn10 Green Lane Toucan Crossing in all of the With Development models.

8.2 The comments raised by AECOM above have been taken into account in the revised Reference Case TRANSYT models and Local Plan models.

8.3 For the 2026 and 2033 Reference Case scenarios the amendments to the TRANSYT models have had very minor effects with regards to the results in the TAA, with a maximum change of 3pcu and 13 second difference in delay at most. In most cases the results are identical or with a maximum change of 1pcu and 4 second difference in delay.

8.4 For the 2033 Local Plan scenarios the amendments to the TRANSYT models have had very minor effects with regards to the results in the TAA, with a maximum change of 3pcu and 42 second difference in delay at most. In most cases the results are identical or with a maximum change of 1pcu and 10 second difference in delay.

8.5 In conclusion the changes to the TRANSYT models have resulted in small changes in the queues and delay on some model links. The changes in the queues and delay do not alter the conclusions drawn in the TAA that:

- In the Reference Case, the traffic generated by the proposed development with the mitigation measures can be accommodated on the network in both the AM peak and PM peak in 2026 and 2033. The impact is not considered severe with reference to NPPF para 111.

- In the Local Plan Case, the traffic generated by the proposed development with the mitigation measures can be accommodated on the network in both the AM peak and PM peak in 2033. The impact is not considered severe with reference to NPPF para 111.

Subject: RE: Land NE of M42 J10 2023 -Full Response to TT 29th January Email [Filed 29 Feb 2024 23:27]

Hi Gareth

Further to the interim comments provided to your 29/1 email, Aecom have now completed their full review of the TRANSYT modelling files supplied by the applicant.

As part of this review, the following documents have been received:

- 1. M42 Jn10 and A5 - Exist With Ref Case Pen Way & Dordon v6 No Development.t16
- 2. M42 Jn10 and A5 - Exist With Ref Case Pen Way & Dordon v6 Site Access & Mitig With Development.t16
- 3. M42 Jn10 and A5 - Local Plan Model v6 No Development.t16
- 4. M42 Jn10 and A5 - Local Plan Model v6 with Site Access & Mitigation With Development.t16
- 5. M42 Jn10 and A5 - Local Plan Model v6 with Site Access & Addl Mitigation With Development.t16
- M42 Jn10 and A5 - Exist With Ref Case Pen Way & Dordon v5.2.t16
- Network Diagrams v8 for TAA NH Copy.xlsx

Following a full review of the additional documentation provided, please see their audit comments summarised below. Please note these comments should be considered in addition to our interim response provided on 22 February 2024.

PLEASE NOTE - Chris Morris is unavailable this week, so I have requested Aecom's availability for a specific Teams meeting next week to go through the below modelling queries which also raised in our recent discussions and previous email correspondence. I expect hear back regarding a proposed meeting upon Chris' anticipated return next week

Demand Dependency Calculations at the A5 / Core 42 Junction

The supplied models have been updated with the correct demand dependency value for Stage 3 as highlighted in our previous correspondence relating to validity of the 2023 Base Model.

The latest version of Transport Assessment Addendum (TAA), dated December 2023, does not show the updated model results from "Model 5.2" in Appendix H. The results contained within Appendix H of the TAA seem to refer to the results of "Model 5.1". Please can the applicant correct the reporting of model results in Appendix H of the TAA?

Reporting of the TRANSYT Results in the Transport Assessment Addendum

The email received from Gareth Wakenshaw on 29/01/2024 stated “The Stage 3 stage call parameter at Meridian Drive was corrected in the TRANSYT model used for the TAA, Version 6… As a result, there is no need to amend the stage call parameter for Meridian Drive in the TAA models, and the results reported in the TAA are not affected.”

The latest version of the TAA that National Highways have received was dated December 2023. From reviewing the TRANSYT results in Appendices H, J, K, M and O of this document, they do not appear to correspond to the TRANSYT models which have been received. Please can the applicant update the TAA to reflect the results contained within the supplied TRANSYT models?

Give Way Parameters at the new A5 / Long Street / Gyspy Lane Junction

The default values provided by JCT Consultancy for use in LinSig models vary significantly from those used in these TRANSYT models. For a right turn opposed movement within a signalised junction, JCT suggests an Opposed Maximum Flow value of 1439 and a Coefficient value of 1.09. The values used in the models have a maximum opposed flow of 781 and a coefficient of 0.28 or 0.30. Please can the applicant provide the method for calculating give way parameters for the three right turn give way movements (Traffic Streams 115, 117 and 118) at the new A5 / Long Street / Gypsy Lane junction for our review?

Whilst it is accepted that these give way parameters need to be site specific for each movement, it should be noted that the give way parameters will likely differ between signalised and unsignalised locations due to driver behaviour.

U-turning flows at the A5 Dordon Roundabout

In Models 3, 4 and 5, the A5 Dordon Roundabout has been converted into a crossroads signalised junction. The network flow diagrams show u-turning movements on both A5 approaches to the roundabout, but with the new road layout, these movements cannot be undertaken. In the 2033 with development tests, the A5 West approach u-turn is 64pcu in the AM Peak and 45pcu in the PM Peak. These u-turning flows have been entered into the “Entry Flows” matrix for OD Matrix 7, but as the movement is not possible in the proposed layout of the junction, the flows have not been carried forward to the “Resultant Flows” matrix and been allocated to the TRANSYT network.

It could be assumed that the A5 west u-turning flows are associated with vehicles exiting New Street to the west of the junction, can the applicant confirm if these vehicles should be redistributed to approach the new junction from the Long Street approach?

Maximum Green Time Violation

In TRANSYT Models 2, 4 and 5 for the 2026 and 2033 PM Peak scenarios, the maximum green time of 6 seconds seems to have been exceeded on the Timings Diagram for Phase B (the pedestrian crossing) on Controller Stream 10 (M42 J10 Green Lane Exit Toucan Crossing). Please can the applicant provide information on the severity of this error message? We note that the Errors and Warnings Window states that the error will be repaired automatically if doing a full optimised run.

We hope this provides sufficient clarity on the way forward. Please contact us should you have any queries.

Kind regards
Patrick

Subject: Land NE of M42 J10 2023 - Interim Response to TT 29th January Email

Hi Gareth

I trust you are well. This is an interim response to your 29/1 email.

In terms of the signal specifications, I have liaised with our traffic signals lead and can confirm that those utilised are the up to date.

We have reviewed the following TRANSYT models and have determined that they accurately model the demand dependency at the A5 / Core 42 Junction where Stage 3 gets called 24% of the time in the PM Peak.

- 1. M42 Jn10 and A5 - Exist With Ref Case Pen Way & Dordon v6 No Development.t16
- 2. M42 Jn10 and A5 - Exist With Ref Case Pen Way & Dordon v6 Site Access & Mitig With Development.t16
- 3. M42 Jn10 and A5 - Local Plan Model v6 No Development.t16
- 4. M42 Jn10 and A5 - Local Plan Model v6 with Site Access & Mitigation With Development.t16
- 5. M42 Jn10 and A5 - Local Plan Model v6 with Site Access & Addl Mitigation With Development.t16
- 6. M42 Jn10 and A5 - Exist With Ref Case Pen Way & Dordon v5.2.t16

We now consider the Base models fit for purpose. Aecom have not yet completed their review the other models, completion of this is anticipated next week.

We have noted that the December 2023 Transport Assessment Addendum does not have model results in Appendices H, J and K that match those in the models that have been submitted. Please can the Transport Assessment Addendum be updated to reflect the results included in the TRANSYT models.

Kind regards
Patrick

KEY	
#	New traffic lanes as a result of the Local Plan works
#	New traffic lanes as a result of the proposed development mitigation works
	Impact of development results in a reduction in queue of over 10pcu and/ or a reduction in delays of over 1 minute.
	Impact of development results in an increase queue of 10pcu or over and/ or an increase in delay of over 1 minute

Appendix G – 2033 Local Plan &

Additional Mitigation

Table 5.5a

KEY	
#	New traffic lanes as a result of the Local Plan works
#	New traffic lanes as a result of the proposed development mitigation works
	Impact of development results in a reduction in queue of over 10pcu and/ or a reduction in delays of over 1 minute.
	Impact of development results in an increase queue of 10pcu or over and/ or an increase in delay of over 1 minute

FOR FURTHER DETAILS REFER TO INSERT A.
EXISTING HEDGES/VEGETATION TO BE TRIMMED BACK TO ACCOMMODATE PROPOSED 2.5m SHARED USE ARRANGEMENT
SHARED USE CYCLEWAY TIES IN TO PROPOSED 2.5m SHARED USE ARRANGEMENT AND A CROSSING POINT IS PROVIDED ON THE OTHER SIDE OF THE ROUNDABOUT AT PENNINE WAY.
FOR FURTHER INFORMATION REGARDING THE SPEED LIMIT CHANGE TO 50MPH. PLEASE REFER TO INSERT B
EXISTING 1m HARDSTRIP
PROPOSED SHARED USE CYCLEWAY
PENNINE WAY MERGE TO A5: 1m HARDSTRIP RETAINED WITH A 0.5m SEPARATION STRIP WHICH DELINEATES THE PROPOSED 2m SHARED USE CYCLEWAY/FOOTWAY
CUTLINE INSERT B
PROPOSED 2.5m FOOTWAY/CYCLEWAY
SPEED CAMERA SIGNAGE TO BE RELOCATED
EXISTING FOOTWAY
PENNINE WAY UNCONTROLLED CROSSSING POINT
CYCLEWAY BOUNDARY PAVING-CORDUROY
POTENTIAL LOCATION FOR RELOCATED SPEED CAMERA SIGNAGE
EXISTING FOOTWAY
VRS SYSTEM OMITTED FROM THE DRAWING AT THIS STAGE. EVERY SHARED USED CYCLEWAY DEVELOPED ON THE ROUNDABOUT WILL REQUIRE NEW VRS INSTALLATION ONCE LAYOUT AGREED.
DRAWING BASED ON OS MAPPING, TOPOGRAPHICAL SURVEY REQUIRED TO OMIT ANY DISCREPANCIES
INSERT B
NEW 50mph SPEED LIMIT STARTS 120m WEST OF PENNINE WAY BRIDGE
TO ENSURE THE ROUNDABOUT IS CD143 COMPLIANT THE SHARED USE ROUTE REQUIRES WIDENING. ADDITIONAL WORK WILL BE REQUIRED REGARDING THE EXISTING NATIONAL HIGHWAYS EMBANKMENTS/SLOPES.
GREEN LANE; ROUNDABOUT EXIT REDUCED TO 1 LANE APPROACHING NEW TOUCAN CROSSING FOR SHARED USE ROUTE IN CENTRAL RESERVE. EXISTING FOOTWAY ROUTE TO BE UPGRADED.
PROPOSED SHARED USE CYCLEWAY
PROPOSED CONTROLLED CROSSING
RESTRICTED TO 2.74m ON THIS SIDE DUE TO THE BRIDGE DECK.
TIES INTO KINSALL GREEN PROPOSALS
PLEASE REFER TO INSERT C FOR FURTHER INFORMATION AT PINCH POINT
PROPOSED SHARED USE CYCLEWAY
PROPOSED UNCONTROLLED CROSSING
WIDENING TO FOUR LANES OPPOSITE GREEN LANE. SHARED USE ROUTE IMPROVED FROM A5 TO GREEN LANE WITH NEW TOUCAN CROSSINGS. REVISED ROAD MARKINGS, SIGNING AND SIGNALS.
PROPOSED CONTROLLED CROSSING
PROPOSED SHARED USE ROUTE DEVELOPED AS PART OF THE A5 EAST IMPROVEMENT
INSERT C
A5 WEST APPROACH: LANE GAIN FROM PENNINE WAY MERGE, WIDENING TO FOUR LANES CREATES A PINCH POINT DUE TO THE HIGHWAY BOUNDARY FENCING.
A5 WEST APPROACH: LANE GAIN FROM PENNINE WAY MERGE, WIDENING TO FOUR LANES AT J10 STOP LINE. REVISED KINSALL GREEN ACCESS. WIDENED SHARED USE ROUTE . CONSIDERATIONS OF SIGNAGE AND LIGHTING ADJUSTMENTS WOULD NEED TO BE UNDERTAKEN AT A LATER STAGE.
TO ENSURE THE ROUNDABOUT IS CD143 COMPLIANT THE SHARED USE ROUTE REQUIRES WIDENING. ADDITIONAL WORK WILL BE REQUIRED REGARDING THE EXISTING NATIONAL HIGHWAYS EMBANKMENTS/SLOPES.
